

### Features

- ▶ Wide bandwidth
- ▶ Single positive supply voltage
- ▶ High linearity
- ▶ Small die size
- ▶ CMM0014 replacement

### Description

The CMD238 is a wideband GaAs MMIC distributed amplifier ideally suited for military, space and communications systems where small size and high linearity are needed over a wide bandwidth. At 10 GHz the device delivers 14 dB of gain with a corresponding output 1 dB compression point of +26 dBm and a 2nd harmonic level of -33 dBc. The CMD238 is a 50 ohm matched design which eliminates the need for external DC blocks and RF port matching. The CMD238 offers full passivation for increased reliability and moisture protection.

### Specifications

#### Absolute Maximum Ratings

Parameter	Rating
Drain Voltage, V <sub>dd</sub>	10 V
RF Input Power	+20 dBm
Channel Temperature, T <sub>ch</sub>	150 °C
Power Dissipation, P <sub>diss</sub>	3.58 W
Thermal Resistance	18.1 °C/W
Operating Temperature	-55 to 85 °C
Storage Temperature	-55 to 150 °C

Operation of this device outside the maximum ratings may cause permanent damage.

#### Recommended Operating Conditions

Parameter	Min	Typ	Max	Units

### Mechanical Information

#### Die Outline (all dimensions in microns)

#### Notes:

1. No connection required for unlabeled pads
2. Backside is RF and DC ground
3. Backside and bond pad metal: Gold
4. Die is 85 microns thick
5. DC bond pads are 100 microns square
6. RF bond pads are 100 x 150 microns

### Applications Information

#### Assembly Guidelines

The backside of the CMD238 is RF ground. Die attach shall be accomplished with electrically and thermally conductive epoxy only. Eutectic attach is not recommended. Standard assembly procedures should be followed for high frequency devices. The top surface of the semiconductor should be made planar to the adjacent RF transmission lines, and the RF decoupling capacitors placed in close proximity to the DC connections on chip.

RF connections should be made as short as possible to reduce the inductive effect of the bond wire. Use of a 0.8 mil thermosonic wedge bonding is highly recommended as the loop height will be minimized. The RF input and output require a double bond wire as shown.

The semiconductor is 85  $\mu\text{m}$  thick and should be handled by the sides of the die or with a custom collet. Do not make contact directly with the die surface as this will damage the monolithic circuitry. Handle with care.

#### Assembly Diagram

**GaAs MMIC devices are susceptible to damage from Electrostatic Discharge. Proper precautions should be observed during handling, assembly and test.**

### Applications Information

#### Biasing and Operation

The CMD238 is biased with a single positive drain supply. Performance is optimized when the drain voltage is set to +8.0 V.

Turn ON procedure:

1. Apply drain voltage  $V_{dd}$  and set to +8 V

Turn OFF procedure:

1. Turn off drain voltage  $V_{dd}$

RF power can be applied at any time.

#### Optional Bias Control

Ground bonds (GB) may be added to pads 5 and 6 to obtain lower drain current. See table below for approximate values.

Pad 6	Pad 5	Pad 4	I <sub>dd</sub> (mA)
GB	N/C	N/C	200
N/C	GB	N/C	280
N/C	GB	GB	250
N/C	N/C	GB	360
