

Product Overview

The CMD247 is a wideband GaAs MMIC low phase noise amplifier ideally suited for military, space and communications systems. At 35 GHz the device delivers 13 dB of gain, a saturated output power of +15 dBm and a noise figure of 5 dB. Also the amplifier provides low phase noise of less than -160 dBc/Hz at 10 kHz offset. The CMD247 is a 50 ohm matched design which eliminates the need for external DC blocks and RF port matching. The CMD247 offers full passivation for increased reliability and moisture protection.

Applications Information

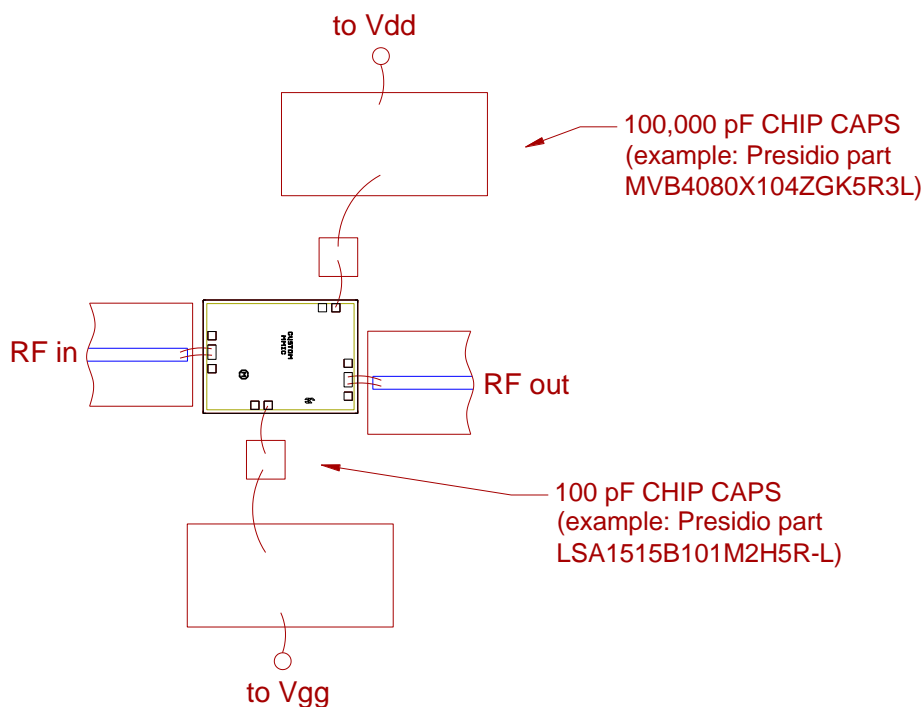

Assembly Guidelines

The backside of the CMD247 is RF ground. Die attach should be accomplished with electrically and thermally conductive epoxy only. Eutectic attach is not recommended. Standard assembly procedures should be followed for high frequency devices. The top surface of the semiconductor should be made planar to the adjacent RF transmission lines, and the RF decoupling capacitors placed in close proximity to the DC connections on chip.

RF connections should be made as short as possible to reduce the inductive effect of the bond wire. Use of a 0.8 mil thermosonic wedge bonding is highly recommended as the loop height will be minimized. The RF input and output require a double bond wire as shown.

The semiconductor is 100 μm thick and should be handled by the sides of the die or with a custom collet. Do not make contact directly with the die surface as this will damage the monolithic circuitry. Handle with care.

Assembly Diagram

GaAs MMIC devices are susceptible to damage from Electrostatic Discharge. Proper precautions should be observed during handling, assembly and test.

Applications Information

Biasing and Operation

The CMD247 is biased with a positive drain supply and a positive gate supply. Performance is optimized when the drain voltage is set to +3.0 V. The recommended gate voltage is +3.0 V.

Turn ON procedure:

1. Apply drain voltage V_{dd} and set to +3 V
2. Apply gate voltage V_{gg} and set to +3 V

Turn OFF procedure:

1. Turn off gate voltage V_{gg}
2. Turn off drain voltage V_{dd}

RF power can be applied at any time.
