

### Features

- ▶ Ultra low noise figure
- ▶ High gain broadband performance
- ▶ Single supply voltage: +3.0 V @ 63 mA
- ▶ Pb-free RoHs compliant 3x3 QFN package

### Description

The CMD264P3 is a broadband MMIC low noise amplifier housed in a leadless 3x3 mm plastic surface mount package. The CMD264P3 is ideally suited for EW and communications systems where small size and low power consumption are needed. The broadband device delivers greater than 25 dB of gain with a corresponding output 1 dB compression point of +11 dBm and a noise figure of 1.7 dB. The CMD264P3 is a 50 ohm matched design eliminating the need for external DC blocks and RF port matching.

### Specifications

#### Absolute Maximum Ratings

Parameter	Rating
Drain Voltage, V <sub>dd</sub>	5.0 V
RF Input Power	+20 dBm
Channel Temperature, T <sub>ch</sub>	150 °C
Power Dissipation, P <sub>diss</sub>	540 mW
Thermal Resistance, $\Theta_{JC}$	120 °C/W
Operating Temperature	-40 to 85 °C
Storage Temperature	-55 to 150 °C
ESD Sensitivity (HBM)	Class 1A

Operation of this device outside the maximum ratings may cause permanent damage.

#### Recommended Operating Conditions

Parameter	Min	Typ	Max	Units
V <sub>dd</sub>	2.0	3.0	4.5	V
I <sub>dd</sub>		63		mA

Electrical performance is measured at specific test conditions. Electrical specifications are not guaranteed over all recommended operating conditions.

### Applications Information

#### Application Circuit

#### Biasing and Operation

The CMD264P3 is biased with a single positive drain supply. Performance is optimized when the drain voltage is set to +3.0 V, though it may be set to a minimum of +2.0 V and a maximum of +4.5 V.

RF power can be applied at any time.

**GaAs MMIC devices are susceptible to damage from Electrostatic Discharge. Proper precautions should be observed during handling, assembly and test.**

### Applications Information

#### Evaluation Board

The circuit board shown has been developed for optimized assembly at CMDS. A sufficient number of via holes should be used to connect the top and bottom ground planes. As surface mount processes vary, careful process development is recommended.
